

# Help with Compound Coin not Syncing

First you must have SHOW hidden files and folders active

**In windows first:**

Click on WINDOWS EXPLORER then ORGANISE tab then FOLDER and SEARCH OPTIONS, next VIEW and then select SHOW HIDDEN FILES< FOLDERS etc. then OK to select.

Now download the file compound.conf to the directory:

C:\Users\Paul\AppData\Roaming\Compound (do this within windows explorer).

\*NB 'Paul' above will be your login user name.

The wallet should find nodes within a few minutes and continue to add more by itself.

## IMPORTANT

If needed you can add nodes to the config file BUT you must save as ALL FILES (this keeps the file as a system file and not as a .txt file).

**SEE ADDING NODES DOCUMENT IF NEEDED**
